

# Offshore wind: Consultants and resources

**At Semco Maritime our specialists come fully backed by an organisation that specialises in every aspect of bringing offshore energy to shore – from engineering and project management to installation and commissioning.**

## **This is our strength - why not make it yours?**

With more than 20 turnkey projects completed in the offshore wind industry Semco Maritime has vast experience with supplying specialists and consultants for the entire offshore wind value chain.

We provide resources and consultants to our customers all over the world for all phases of their project realisation. Our support is based on our own expertise within project development, construction management, and operation and maintenance management in the offshore wind industry.

Our in-house experience within offshore substation engineering, HVDC, package and project management, site management, offshore construction, commissioning, O&M, and HSE gives our consultants and resources an extraordinary possibility to also add value to your organisation and your projects.

### **Benefit from our knowhow:**

- Our people always have technical back-up from »home«
- You will benefit from our offshore wind experience and in-house engineers across all disciplines!

### **Our people are more than »a piece of paper«:**

- Our people have valuable industry knowhow and solid project experience from working on projects in our organisation.
- Long-term or short-term consultants will strengthen your project team or organisation from day ONE!

### **Use our resource pool:**

- Dip into our large pool of resources and find strong profiles of all trades
- You can use the same people again and again to support efficient project execution.
